VII Semester B.E. (IT)

Under the guidance of
Mr. M. S. Chaudhari

Department of Information Technology
Priyadarshini Bhagwati College of Engineering, Nagpur (M.S.)
Session: 2020-21

Priyadarshini Bhagwati College of Engineering, Nagpur.

Department of Information Technology

Session: 2020-21

Certificate

This is to certify that the seminar report entitled “**ONLINE EXAMINATION APPLICATION**” is a bonafide work done under our guidance to **Abhishek Padhey, Akhilesh Thakare, Bhushan Waghdhare, Gaurav Thakare, Mayank Rewatkar** and is submitted to **Rashtrasant Tukadoji Maharaj Nagpur University, Nagpur** in the partial fulfilment of the requirements for the Degree of **Bachelor of Engineering in Information Technology**.

Mr. M. S. Chaudhari
Project Guide

Mr. M. S. Chaudhari
H. O. D.

Dr. N. K. Choudhari
Principal

ACKNOWLEDGEMENT

Many people have contributed in bringing this report to its present form. We are the presenter ascribe our success in this venture to our guide Mr. M.S.Chaudhari , Assistant Professor of Information Technology Department, PBCOE. They endeavor for perfection, indefatigable zeal, enthusiasm, foresight and innovation contributed in a big way in completing this report with considerable ease in the stipulated time.

We are also grateful to Prof. M.S.Chaudhari, H.O.D. of Information Technology Department, PBCOE. The enthusiastic feedback from him was instrumental improving the presentation and in establishing our confidence in the structuring of the material. We also thank to the entire teaching and the Non-teaching staff of the Department for their co-operation.

We express our admirations for Dr. (Mrs.) A.R. Chaudhari, Dean Academics, PBCOE for her valuable advice and support throughout this venture.

Our sincere thanks are extended to Dr. N. K. Choudhari, Principal, PBCOE for constantly encouraging and helping us during the course.

Last but not least, our thanks are extended to all our friends and colleagues, those who gave us inspiration, those who gave their constructive ideas and also those who criticized us for our flaws, which finally made this report, see the light of the day.

Mayank Rewatkar

ABSTRACT

The main purpose of this **project** is to the development of an **online exam system** for the ease of students so that they can attempt the **exam** by sitting at home and they do not need to travel to distant places for giving various **exams**. This application will also contribute towards e-learning. The system is an online application that can be used to take tests online and get instant results.

Online Examination System project could be a web portal which is developed or implemented in java domain or platform. Online Examination System can reduce the hectic job of assessing the answers given by candidates manually.

It will reduce paper work to be an integrated Online Examination System. The result can be shown immediately to the students reducing the anxiety. Can create various reports and graphs for evaluation purpose almost instantly when and where required.

After examination is over the report card is generated through i-Report and certificates if it is required.

CHAPTER – 1: INTRODUCTION

Online Examination System project which is developed or implemented in java domain or platform. This project is helpful for students to practice different mock examinations. In current generation lots of the examinations like GRE, CAT, and MAT etc is conducted through online system. This project will help students to get practiced to online examination method by taking mock tests from this Desktop App. Online Examination System portal is implemented in various modules student examination module and examination admin module. Admin module will add multiple courses under different branches so students can easily know about test details. Student examination module students ought to register with application and choose interested courses and participate in the online test. The online objective exam system is an online test system that allows users to take online tests and automatically generates results based on answers marked by users. The system is to be used for various online tests conducted by schools colleges and other institutions. The system is an online application that can be used to take tests online and get instant results. designed. It also consists of an admin module. The admin module leads to admin dashboard which is accessible through admin login. The admin dashboard allows admin to add new questions into system along with 4 options and 1 right answer. The admin may also set the time in minutes for every subject and number of questions. So now whenever user registers he may then login using registered username password. The user is now allowed to give a test as

desired. Online Examination System is developed or designed for educational institutes like school, colleges, and private institutes to conduct logic test of their students on regular basis.

On choosing a subject the test starts and user may now tick desired answers within the time limit. After the time ends the system goes to the result page and shows users score to him.

It was a Desktop application. Project based on Hibernate Framework In Java which is composed of different modules like Config, View, Model, Services and Lib. We have also used MySQL Database for maintaining student's record and exam related details. Various validation were implemented throughout the signup process and after the successful sign-up, the password was sent to the student's registered mail id from where the student were redirected to examination frame in order to proceed for the exam The authority to approve student for exam was only to the admin. After examination is over the report card is generated through i-Report and certificates if required.

CHAPTER – 2: PROBLEM STATEMENT

Problem Definition Online Examination is very helpful to users. Online Examination System allows jumping to specific questions based on the previous answer. The online examination system limits the number of times a student can write a question. Login module helps the user to login to the application.

The traditional have many drawbacks such as time consuming, Difficulty of analysing the test manually, More observers are required to take exam of many students, Results are not accurate since calculations is done manually, The chance of losing exam's result is higher in current systems, Checking of result is time consuming since it done manually, Limitation of no of student can give examination at a time. with the development of information technology and use it in an orderly and properly helps to overcome the existing error in the manual system . Online examination system saves the exams information in a database, and this make it an easier way to give exam teachers can add theirs exams rules, and student can give exam in a totally automated system.

CHAPTER – 3: AIM AND OBJECTIVES

AIM:-

The online objective exam system is an online test system that allows users to take online tests and automatically generates results based on answers marked by users. The system is an online application that can be used to take tests online and get instant results

OBJECTIVES:-

- Online Examination System can reduce the hectic job of assessing the answers given by candidates manually.
- Responses or the answers by the candidates can be checked automatically and instantly.
- It will reduce paper work to be an integrated Online Examination System.
- The result can be shown immediately to the students reducing the anxiety.
- Can create various reports and graphs for evaluation purpose almost instantly when and where required.

CHAPTER – 4: LITERATURE SURVEY

Many different researches have focused on the subject of an online examination system these work can be represented as following: SIETTE: Guzman and Conejo (2005) proposed an online examination system called System of Intelligent Evaluation using Tests for Tele-education (SIETTE). SIETTE is a web-based environment to generate and construct adaptive tests. It can be used for instructional objectives, via combining adaptive student self-assessment test questions with hints and feedback. SIETTE supports secure login and portability features. On the other hand, the other features: resumption capability, multi-instructor, random question selection, random questions distribution and random choices distribution are missing

EMS :Rashad Et. Al. (2010) proposed a web-based online examination system called Exam Management System (EMS). EMS manages the examination and auto-grading for students exams and supports conducting exams, collects the answers, auto mark the submissions, and produce the reports for the test. EMS supports secure login, multi-instructor, and portability features. However, the other features: resumption capability, random question selection, random questions distribution, and random choices distribution are missing.

ArvindSingh,NirajShirke,KiranShette 2011.The project evaluates the examiners by using the online examination system concept. The exams will be totally customizable. This system will

check results automatically basing on students answers. CBTS :Fagbola et. al. (2013)
developed a Computer Based Test System (CBTS).

CHAPTER – 5: FLOWDIAGRAM

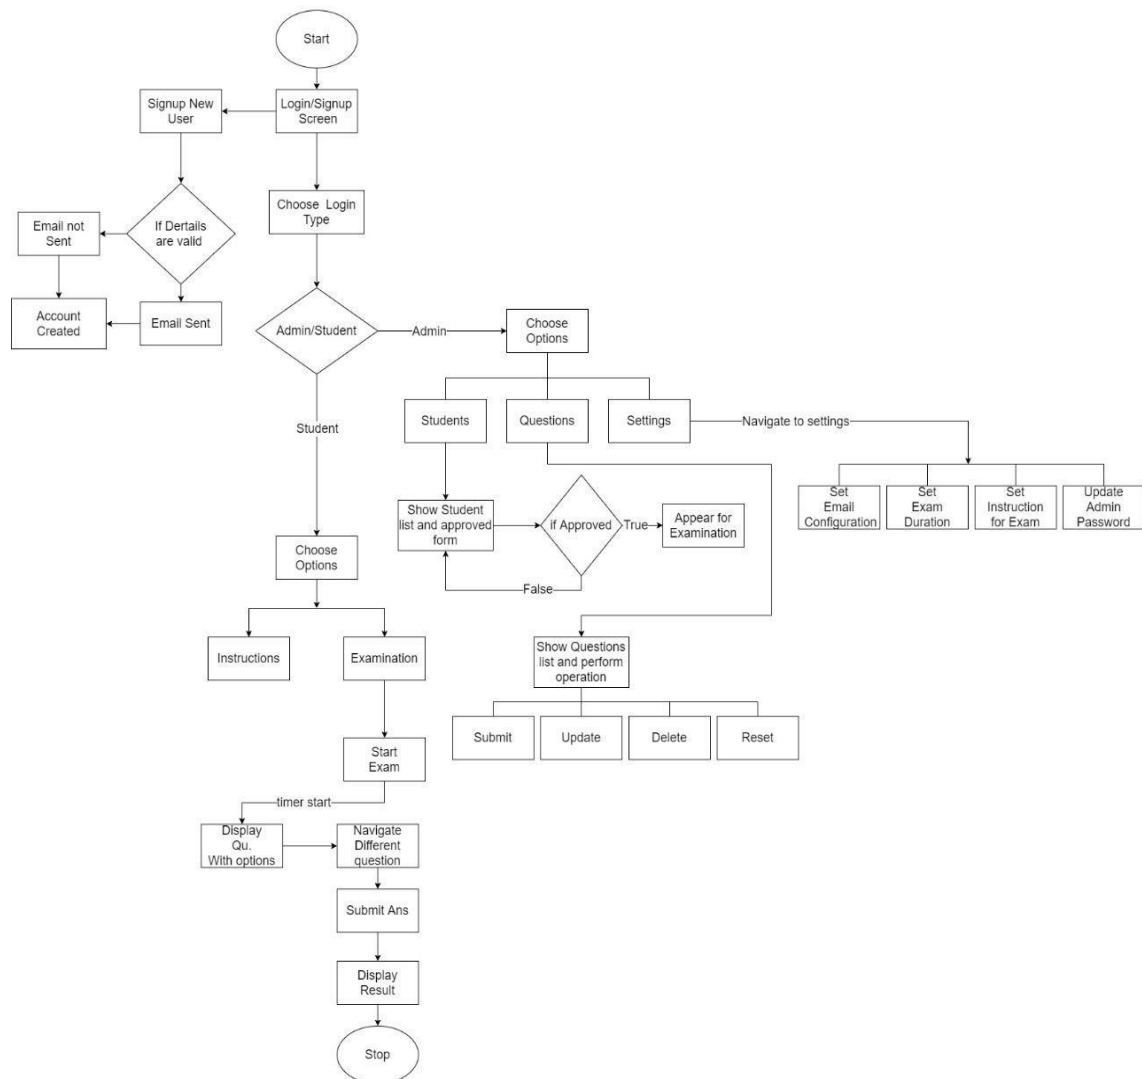

Fig1. Flow Diagram of Online Examination System

Online Examination System is used to give Examination from anywhere by students. Given is the the data flow diagram of online Examination System. They are divided into various modules. One module is on Entry i.e. Login Module. There are two types of login

1) Admin Login

2) Student Login

If the student is not Register into the database it will get signup first and it will allotted random password which is sent on their email address. After account created of student get login by its email and password. There are various option in the panel for student is instruction, start Exam etc.

Admin having another panel having multiple options which is used to moderate the students. Admin having the work to arrange the Exam, perform CRUD operation on students. It having rights to allow which student can attempt the Exam. The admin can approve or not approve the student. Allotment of time, questions etc things are done by admin.

After that the score card of students who give exam. After finishing exam the result will get display to the student. This things will be done by using the i-Report this project will make exam fast and forward and reduces paper work.

CHAPTER- 6: METHODOLOGY

Main methodology activities held during the research is acquiring information and knowledge about online examination system through reading books, and researches that were previously done in related area. All the research materials were obtained over the internet, Wikipedia and other websites.

Next step taken is reading, comprehending and analyzing literature review and matching information obtained. This research emphasize online examination system, which include usability, user-friendly interface, reliability, costing and meeting needs of target users.

The methodology chosen to develop this system is waterfall model approach. I opted for this method because I found that it is the best for my project where the stages involved can assist my level of progress. Many developers prefer waterfall model and widely use it as a development strategy. 11 Waterfall model approach is chosen because the approach allows the development of the system to be revised after the stages is finished. Once the stages are not satisfied, then going back to the previous stages can be considered necessary to add or modify any features. The different stages for this model:

- Project Planning
- Requirements Design
- Design
- Development

- Integration and Testing
- Installation and Acceptance

1. Planning

The purpose of this phase is to determine the best solution and steps taken to develop the system. Planning involves the details planning for the timing of the working progress and types of technique will be taken next. Planning also involves that the methodology that will going to use for this project.

2. Requirement Analysis

The purpose of this phase is to build logical model of this system. In addition, this phase also needed to understand the applications, fact finding technique like document reviews, surveys, observations, and sampling must be made to identify application requirement, software requirement and hardware requirement. In this phase, what kind of data requirement and the functional requirement will been decide.

3. Design

This phase will produce draft of the system architecture and the prototype of the application that will satisfy all requirement analysis. At this phase the user interface and all necessary input and process will be identify. This phase also determine the application architecture, which is going to shows how to transform the logical design into basic system coding to generate the first prototype of the system. The result for this phase application interface and

system design specification. For this project, the design will be created using the Java Net beans.

4. Implementation

During this implementation phase, the system will be constructed. All codes are generated inside this phase. At the end of this phase, system should running and most of the function for the system should be able to use. Based from the previous phase, from the prototype, the system will become the first version inside this phase.

5. Testing

This phase will evaluate or verify the system that was developed. This phase will have a simulation data which will simulate the true database for the system. This is to test the functionality of the system in comparing a capture data with a database. Beside, all the functionality that may cause errors or problems to the system must be specified inside this phase because, the final result of the system is a very high priority and important. However, the testing phase will only cover to overcome the problem statement and the system objectives.

CHAPTER – 7: REQUIREMENTS

Software Requirements

- O/S : Windows XP.
- Language : Java.
- IDE : Net Beans 8.2
- Data Base : MySQL

Hardware Requirements

- System : Pentium IV 2.4 GHz
- Hard Disk : 160 GB
- Monitor : 15 VGA color
- Mouse : Logitech.
- Keyboard : 110 keys enhanced
- Ram : 2GB

CHAPTER – 8: APPLICATION

1. It saves time as it allows multiple students to give their exam at the same time and displays the result immediately as the test gets over.
2. It will reduce paper wastage.
3. System will check responses given by the students automatically and immediately.
4. Question papers are automatically generated by the server.
5. Administrator has administrative power to create, modify and delete the exam.

CHAPTER – 9: EXPERIMENTAL RESULT

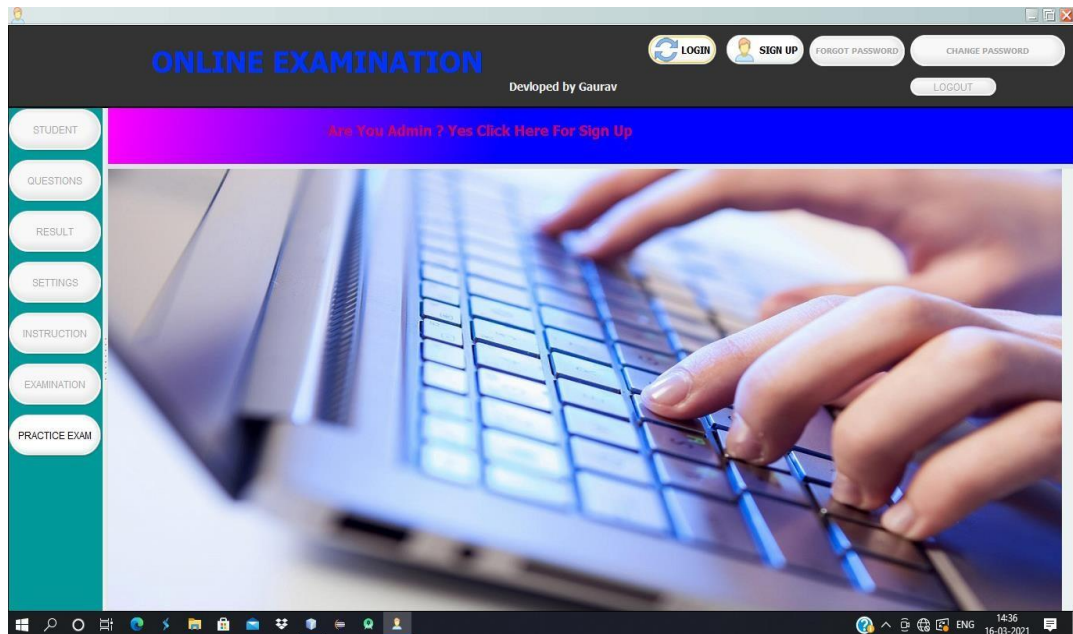

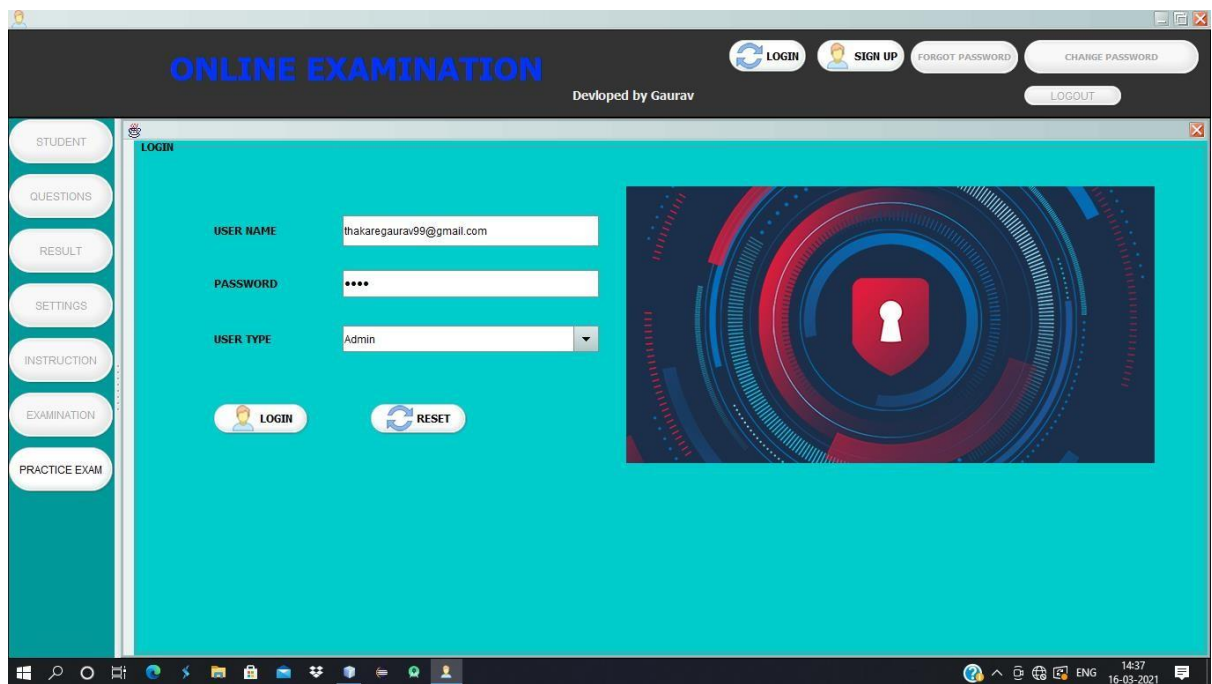

Fig 8.1 - Mainframe Dashboard

The screenshot shows the 'ONLINE EXAMINATION' sign-up form. The header and sidebar are identical to the dashboard. The main content area has a red background and contains a sign-up form with the following fields: NAME, EMAIL, MOBILE NO, CLASS (with a dropdown menu showing 'Year 1'), and DATE OF BIRTH (with a date picker showing '16/03/2021'). A 'SUBMIT' button is located below the form. A 'SignUpGenius' logo is displayed on the right side of the form. The Windows taskbar at the bottom shows the date as 16-03-2021 and the time as 14:36.

Fig 8.2 – Signup Form

The screenshot displays a web application titled "ONLINE EXAMINATION" with a dark header. The header includes navigation links: "LOGIN", "SIGN UP", "FORGOT PASSWORD", "CHANGE PASSWORD", and "LOGOUT". Below the header, a sidebar on the left contains buttons for "STUDENT", "QUESTIONS", "RESULT", "SETTINGS", "INSTRUCTION", "EXAMINATION", and "PRACTICE EXAM". The main content area is a light blue box labeled "LOGIN" containing a form with the following fields: "USER NAME" (filled with "thakaregaurav99@gmail.com"), "PASSWORD" (masked with "****"), and "USER TYPE" (a dropdown menu set to "Admin"). Below the form are "LOGIN" and "RESET" buttons. To the right of the form is a decorative graphic of concentric circles with a red shield and a white keyhole in the center. The Windows taskbar at the bottom shows the system clock as 14:37 on 16-03-2021.
